

IDAWRA and BREN:

Channel-forming Events of the 2017 Spring Flood Season

Friday, Feb. 9, 2018

Doors open at 11:30, bring a lunch and socialize

Program starts at 12:00

LEED Platinum Banner Bank [Building, 2nd floor, 950 W Bannock St, Boise ID 83702](#)

Speaker: Darcy Sharp, Environmental Data Analyst, City of Boise

As the City of Boise is working on restoring habitat on the Lower Boise River, many recommendations include side channel restoration. Complex channel morphology insulates and buffers stream temperatures, allows access to the floodplain, mitigates flood flows, filters pollutants, and allows groundwater recharge. In an October 2017 channel survey, there were observed many channel-forming events that included reconnection of side channels and access to the floodplain.
